

Design Award for ZEISS Victory 32 FL

An international jury at the North Rhine-Westphalia Design Center presented the 2005 red dot award for outstanding design quality to the Sports Optics Division for the ZEISS Victory 32 FL line of binoculars.

Victory 32 FL binoculars are compact, lightweight, ergonomically designed products with lenses containing fluoride (FL) to meet the highest demands. They feature a large field of view and are excellent for near range observation. With good reserves for low-light conditions, they deliver high resolution and detail recognition.

The Victory 8x32 T* FL is particularly well-suited for traveling, hiking and stalking prey. The Victory 10x32 T* FL is designed for the extreme demands of birdwatchers, hunters and nature lovers.

Two Awards for the 1540XB CrossBeam®

At Semicon Europe 2004 in Munich, the 1540XB CrossBeam® electron microscope already received the "Editors' Choice Best Product Award" from the "Semiconductor International" magazine. During Semicon West 2005 in San Francisco, the microscope also received the "Best Tool Award" in the "Yield Management" category of the "Eurosemi IC Industry Award" contest.
